Double-Data-Rate Octal SPI PSRAM

Specifications

- **Single Supply Voltage**
  - VDD=1.62 to 1.98V
  - VDDQ=1.62 to 1.98V
- **Interface**: Octal SPI with DDR Xccela mode, two bytes transfers per one clock cycle
- **Performance**: Clock rate up to 200MHz, 400MB/s read/write throughput
- **Organization**: 128Mb, 16M x 8bits with 1024 bytes page size
  - Column address: AY0 to AY9
  - Row address: AX0 to AX13
- **Refresh**: Self-managed
- **Operating Temperature Range**
  - Tc = -40°C to +85°C (standard range)
  - Tc = -40°C to +105°C (extended range)
- **Maximum Standby Current**
  - 600µA @ 105°C
  - 400µA @ 85°C
  - 200µA @ 25°C
  - 60µA @ 25°C (Half Sleep Mode with data retained)

Features

- **Low Power Features**
  - Partial Array Self-Refresh (PASR)
  - Auto Temperature Compensated Self-Refresh (ATCSR) by built-in temperature sensor
  - User configurable refresh rate
  - Ultra Low Power (ULP) Half Sleep mode with data retained
- **Software Reset**
- **Reset Pin Available**
- **Output Driver LVCMOS** with programmable drive strength
- **Data Mask (DM)** for write data
- **Data Strobe (DQS)** enabled highspeed read operation
- **Register Configurable** write and read initial latencies
- **Write Burst Length**, maximum 1024 bytes, minimum 2 bytes
- **Wrap & Hybrid Burst** in 16/32/64/1K lengths
- **Linear Burst Command**

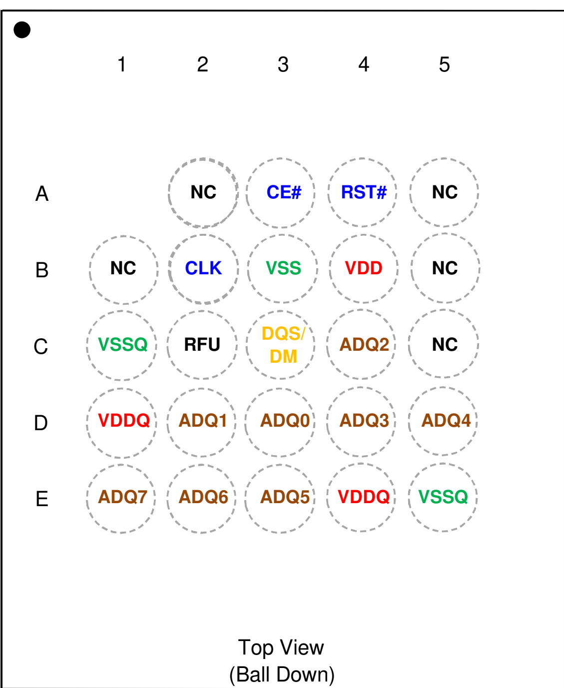
2 Package Information

The APS12808L-OBx is available in miniBGA 24L package 6 x 8 x 1.2mm, ball pitch 1.0mm, ball size 0.4mm, package code "BA".

- Ball Assignment for MINIBGA 24L



(6x8x1.2mm)(P1.0)(B0.4)

Note:

1. Part Number APS12808L-OB-BA for 128Mb.

2. RFU: Reserved for Future Use, which is reserved for 2nd CE#.

3. NC: No Connection internally.

5 Signal Table

All signals are listed in Table 2.

Table 2: Signals Table

Symbol	*Type*	*Description*	*Comments*
V_{DD}	Power	Core supply 1.8V	
V_{DDQ}	Power	IO supply 1.8V	
V_{SS}	Ground	Core supply ground	
V_{SSQ}	Ground	IO supply ground	
A/DQ[7:0]	IO	Address/DQ bus [7:0]	
DQS/DM	IO	DQ strobe clock during reads, Data mask during writes. DM is active high. DM=1 means "do not write".	
CE#	Input	Chip select, active low. When CE#=1, chip is in standby state.	
CLK	Input	Clock signal	
RESET#	Input	Reset signal, active low. Optional, as the pad is internally tied to a weak pull-up and can be left floating.

6 Power-Up Initialization

Octal DDR products include an on-chip voltage sensor used to start the self-initialization process. V_{DD} and V_{DDQ} must be applied simultaneously. When they reach a stable level at or above minimum V_{DD}, the device is in Phase 1 and will require 150µs to complete its self-initialization process. The user can then proceed to Phase 2 of the initialization described in this section.

During Phase 1 CE# should remain HIGH (track V_{DD} within 200mV); CLK should remain LOW.

After Phase 2 is complete the device is ready for operation, however Half Sleep entry and Deep Power Down (DPD) entry are not available until Half Sleep Power Up (tHSPU) or DPD Power Up (tDPDp) duration is observed.

6.1 Power-Up Initialization Method 1 (via. RESET# pin)

The RESET# pin can be used to initialize the device during Phase 2 as follows:

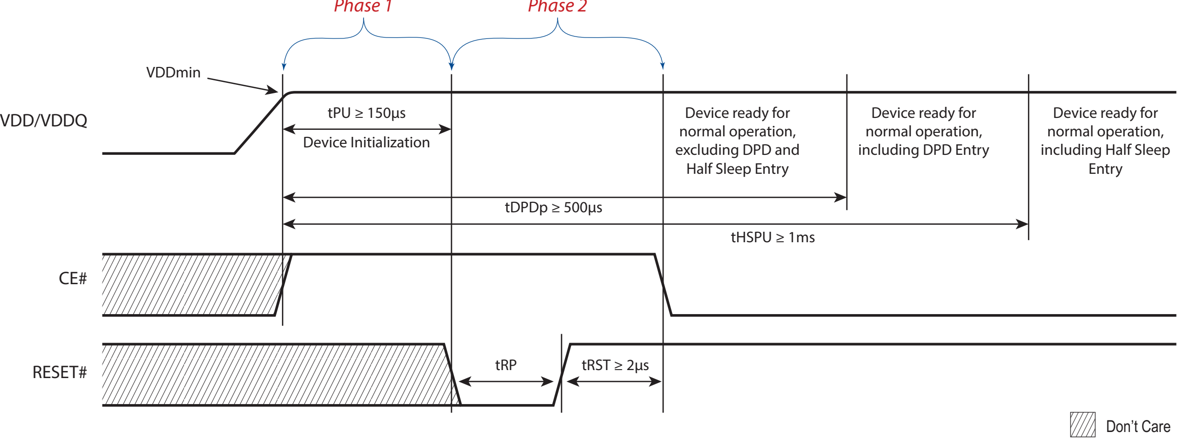

Figure 1. Power-Up Initialization Method 1 RESET#

The RESET# pin can also be used at any time after the device is initialized to reset all register contents. Memory content is not guaranteed. Timing requirements for RESET# usage are shown below.

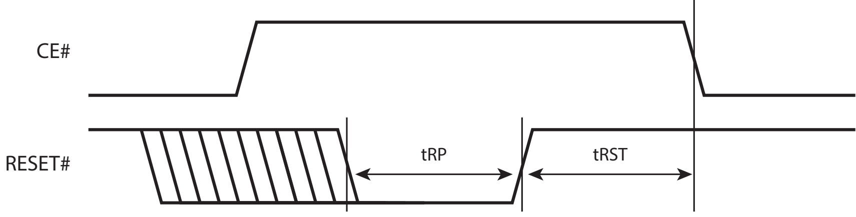

Figure 2. RESET# Timing

AP Memory reserves the right to change products and/or specifications without notice
@2019 AP Memory. All rights reserved

6.2 Power-Up Initialization (via. Global Reset)

As an alternate power-up initialization method, after the Phase 1 150µs period the Global Reset command can also be used to reset the device in Phase 2 as follows:

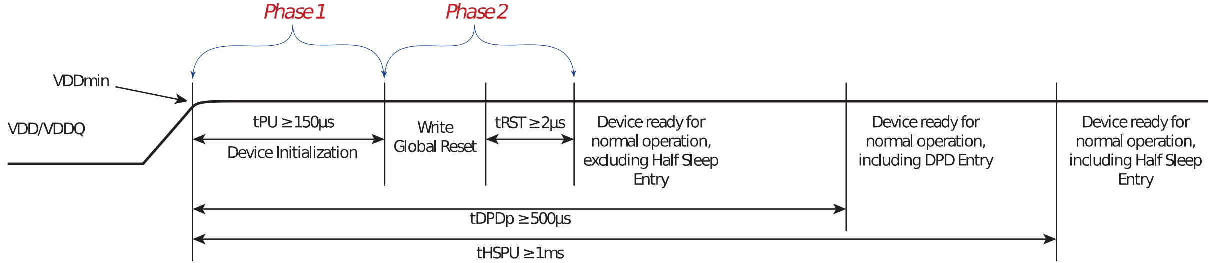

Figure 3. Power-Up Initialization Timing with Global Reset

The Global Reset command resets all register contents. Memory content is not guaranteed. The command frame is made of 4 clocked CE# lows. Clocking is optional during tRST. The Global Reset command sequence is shown below. Note that Global Reset command can be used ONLY as Power-up initialization.

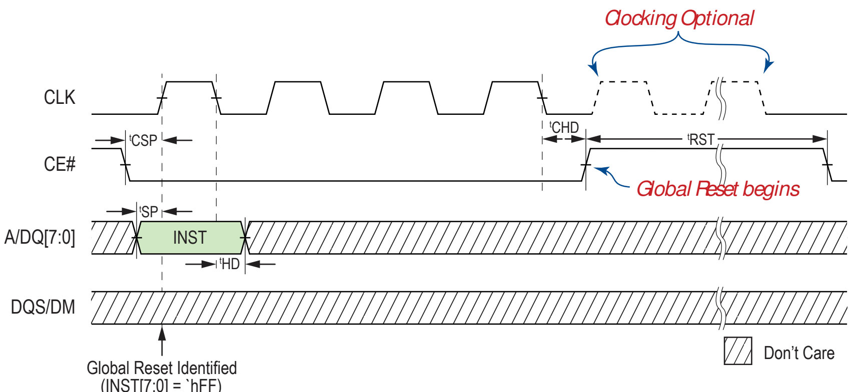

Figure 4: Global Reset

7 Interface Description

7.1 *Address Space*

Octal DDR PSRAM device is byte-addressable. Memory accesses are required to start on even addresses (A[0]='0). Mode Register accesses allow both even and odd addresses.

7.2 *Burst Type & Length*

Read and write operations are default Hybrid Wrap 32 mode. Other burst lengths of 16, 32, 64 or 1K bytes in standard or Hybrid wrap modes are register configurable (see Table 20). The device also includes command for Linear Bursting. Bursts can start on any even address. Write burst length has a minimum of 2 bytes. Read has no minimum length. Both write and read have no restriction on maximum burst length as long as tCEM is met.

7.3 *Command/Address Latching*

After CE# goes LOW, instruction code is latched on 1st CLK rising edge. Access address is latched on the 3rd, 4th, 5th & 6th CLK edges (2nd CLK rising edge, 2nd CLK falling edge, 3rd CLK rising edge, 3rd CLK falling edge).

7.4 *Command Truth Table*

The Octal DDR PSRAM recognizes the following commands specified on the INST (Instruction) cycle defined by the Address/DQ pins.

	1st CLK		*2nd CLK*		*3rd CLK*	
Command	↑	↓	↑	↓	↑	↓
Sync Read	00h		A3	A2	A1	A0
Sync Write	80h		A3	A2	A1	A0
Sync Read (Linear Burst)	20h		A3	A2	A1	A0
Sync Write (Linear Burst)	A0h		A3	A2	A1	A0
Mode Register Read	40h		×			MA
Mode Register Write	C0h		×			MA
Global Reset	FFh		×			

Remarks:
× = don't care (V_{IH}/V_{IL})
A3 = unused address bits are reserved
A2 = RA[13:6]
A1 = RA[5:0],CA[9:8]
A0 = CA[7:0]
MA = Mode Register Address

AP Memory reserves the right to change products and/or specifications without notice

7.5 Read Operation

After address latching, the device initializes DQS/DM to '0 from **next** CLK rising edge of the 3rd clock cycle (A1). See Figure 5 below.

Output data is available after LC latency cycles, as shown in Figure 6 & Figure 7, LC is defined in Table 5 and Table 6. When data is valid, A/DQ[7:0] and DQS/DM follow the timing specified in Figure 8. Synchronous timing parameters are shown in Table 29 & Table 30.

In case of internal refresh insertion, variable latency output data may be delayed by up to (LC*2) latency cycles as shown in Figure 6. True variable refresh pushout latency can be anywhere **between** LC to LCx2. The 1st DQS/DM rising edge after read pre-amble indicates the beginning of valid data.

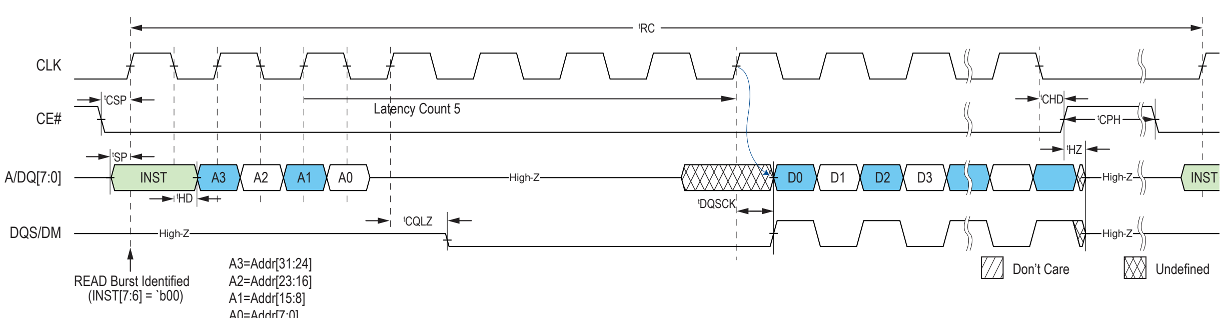

Figure 5: Synchronous Read

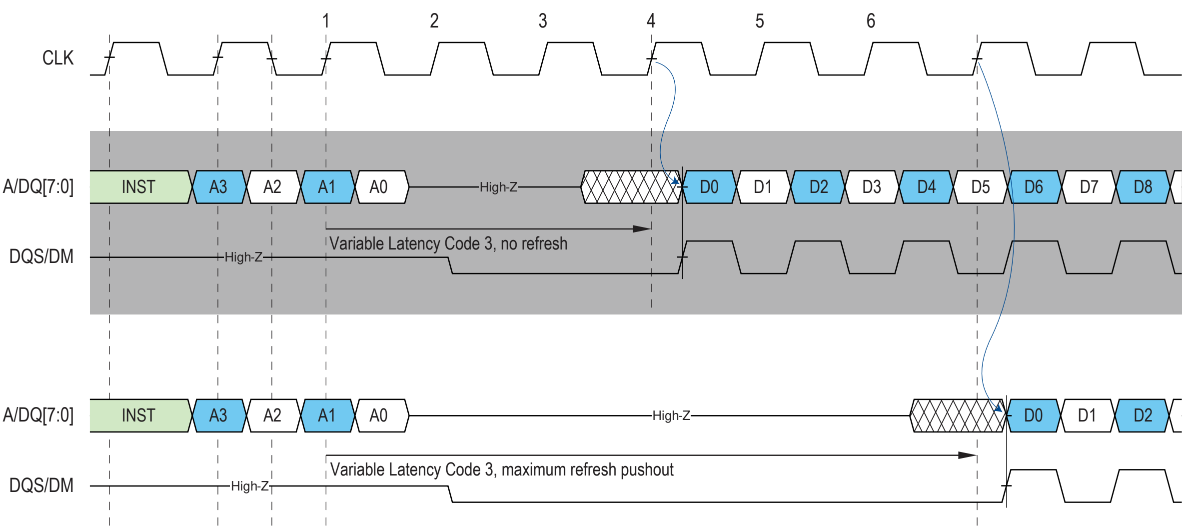

Figure 6: Variable Read Latency Refresh Pushout

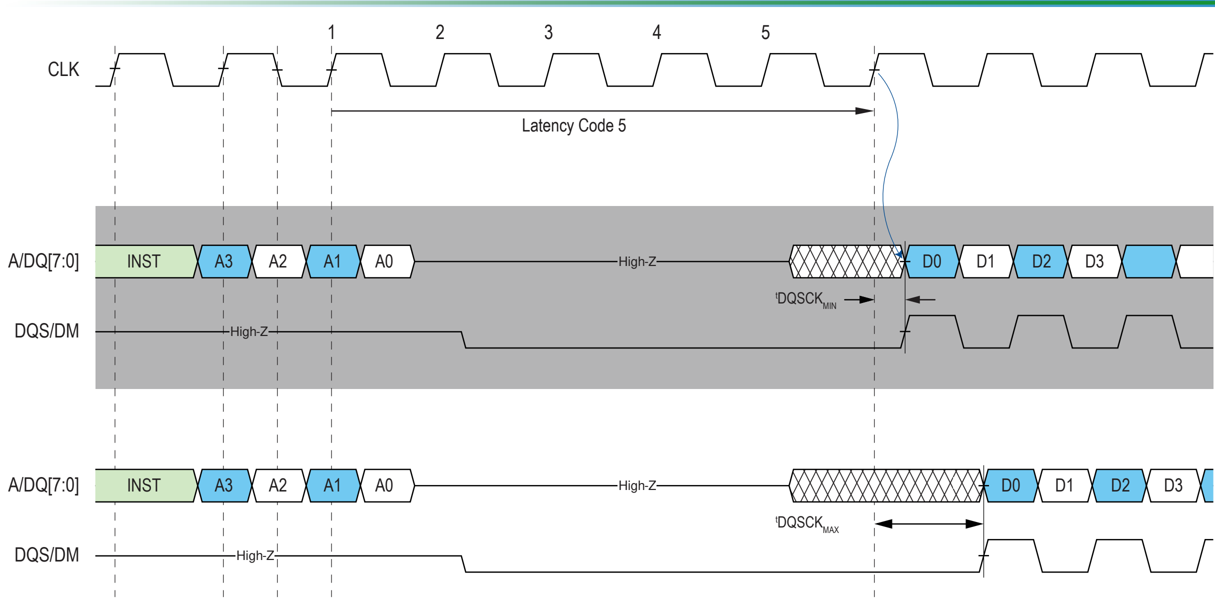

Figure 7: Read Latency & tDQSCK

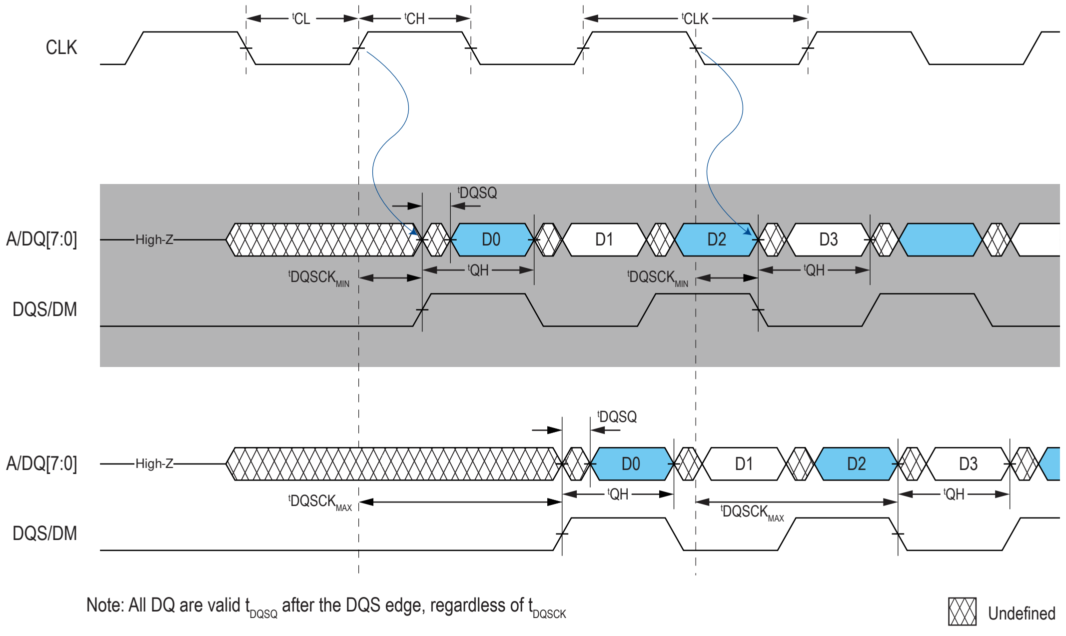

Figure 8: Read DQS/DM & DQ timing

AP Memory reserves the right to change products and/or specifications without notice
@2019 AP Memory. All rights reserved

7.6 *Write Operation*

A minimum of 2 bytes of data must be input in a write operation. In the case of consecutive short burst writes, tRC must be met by issuing additional CE# high time between operations. Single-byte write operations can be performed by masking the un-written byte with DQS/DM as shown in Figure 9.

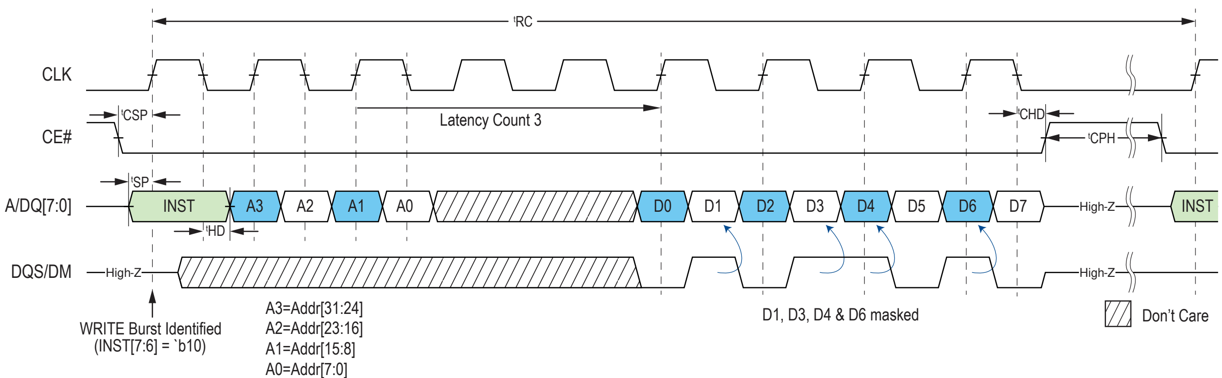

Figure 9: Synchronous Write followed by any Operation

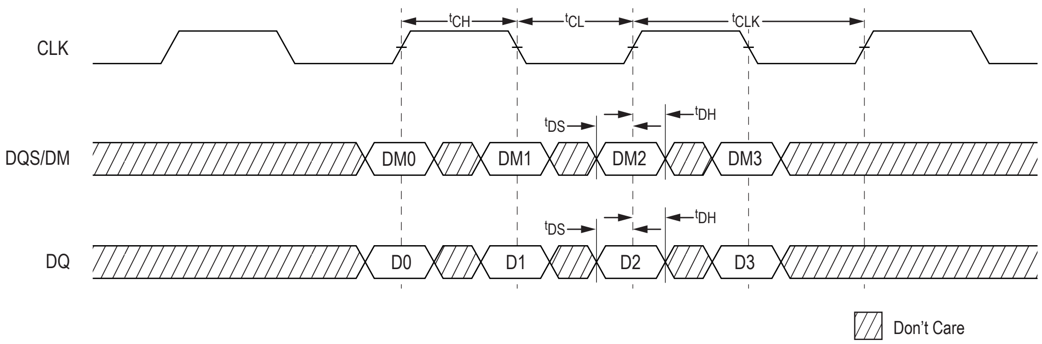

Figure 10: Write DQS/DM & DQ Timing

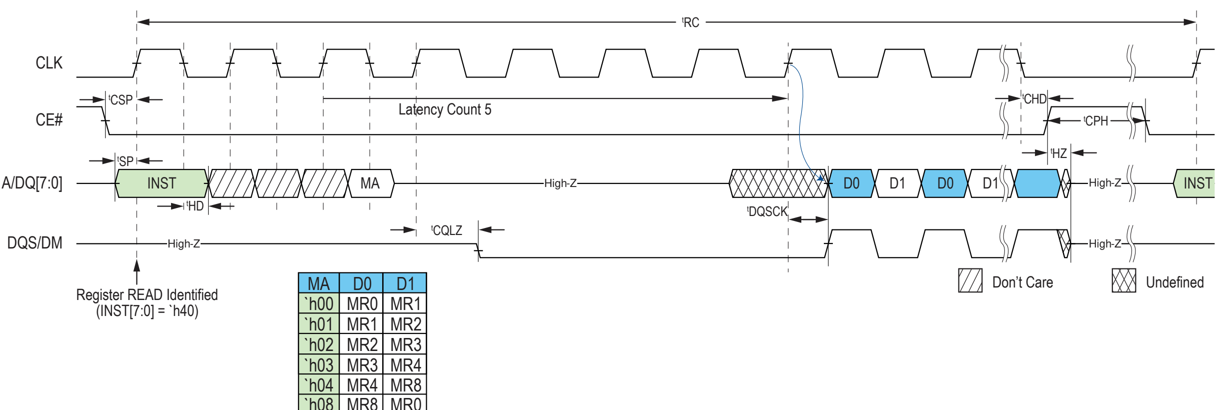
7.7 Control Registers

Register Read is shown below. Mode Address in command determines which Mode Register is read from as Data0 (see chart in the Figure below).



MA	D0	D1
`h00	MR0	MR1
`h01	MR1	MR2
`h02	MR2	MR3
`h03	MR3	MR4
`h04	MR4	MR8
`h08	MR8	MR0

Figure 11: Register Read

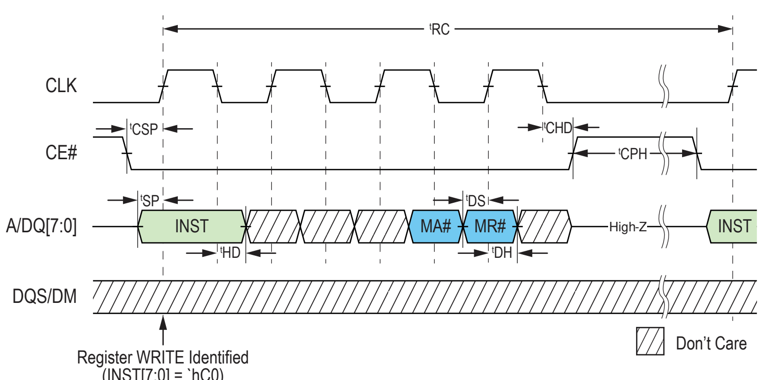


Figure 12: Register Write

Register Writes are Latency 1, whereas Register Reads use the same MR0[5:2] settings as burst reads in Table 5 without push out regardless of variable or fixed defined by MR0[5]. Registers 0, 4 and 8 are read and writable. Registers 1, 2 and 3 are read-only. Register 6 is write-only. Register mapping is shown in Table 3. Note that MR0[6], MR0[7], MR4[4], MR8[3] and MR8[7] must be written to b'0.

Table 13: Row Boundary Crossing Enable (MR3[7])

MR3[7] (read-only)	RBXen
0	RBX not supported
1	RBX supported via MR8[3]=1

Table 14: Operating Voltage Range (MR3[6])

MR3[6]	VCC
0	1.8V (default)
1	3V

Table 15: Self Refresh Flag (MR3[5])

MR3[5] (read-only)	Self Refresh Flag
0	Slow Refresh (allowed via MR4[3]=1, otherwise Fast Refresh)
1	Fast Refresh

MR3[5] is a refresh indicator that corresponds to device internal temperature. This bit will indicate 0 when the temperature is low enough to allow a slow frequency refresh rate.

Table 16: Write Latency MR4[7:5]

Default powered up behavior is WL 5

MR4[7:5]	Write Latency	Fmax (MHz)
000	3	66
100	4	109
010	5 (default)	133
110	6	166
001	7	200

Table 17: Refresh Frequency MR4[3]

MR4[3]	Refresh Frequency
0	Fast (default)
1	Enables Slow Refresh if temperature allows

AP Memory reserves the right to change products and/or specifications without notice
@2019 AP Memory. All rights reserved

Table 18: PASR MR4[2:0]

The PASR bits restrict refresh operation to a portion of the total memory array. This feature allows the device to reduce standby current by refreshing only that part of the memory array required by the host system. The refresh options are full array, one-half array, one-quarter array, one-eighth array, or none of the array. The mapping of these partitions can start at either the beginning or the end of the address map.

128Mb (64Mbx2)				
Codes	***Refresh Coverage***	***Address Space***	***Size***	***Density***
‘000	Full array (default)	000000h-FFFFFFh	16M x8	128Mb
‘001	Bottom 1/2 array	000000h-7FFFFFh	8M x8	64Mb
‘010	Bottom 1/4 array	000000h-3FFFFFh	4M x8	32Mb
‘011	Bottom 1/8 array	000000h-1FFFFFh	2M x8	16Mb
‘100	None	0	0M	0Mb
‘101	Top 1/2 array	800000h-FFFFFFh	8M x8	64Mb
‘110	Top 1/4 array	C00000h-FFFFFFh	4M x8	32Mb
‘111	Top 1/8 array	E00000h-FFFFFFh	2M x8	16Mb

AP Memory reserves the right to change products and/or specifications without notice
@2019 AP Memory. All rights reserved

Table 19: ULP Modes MR6[7:0]

MR6[7:0]	ULP Modes
‘hF0	Half Sleep
‘hC0	Deep Power Down
others	reserved

Note: see 7.8 Half Sleep Mode , 7.9 Deep Power Down Mode for more information.

Table 20: Burst Type MR8[2], Burst Length MR8[1:0]

By default the device powers up in 32 Byte Hybrid Wrap. In non-Hybrid burst (MR8[2]=0), MR8[1:0] sets the burst address space in which the device will continually wrap within. If Hybrid Burst Wrap is selected (MR8[2]=1), the device will burst through the initial wrapped Burst Length once, then continue to burst incrementally up to maximum column address (1K) before wrapping around within the entire column address space. Burst Length (MR8[1:0]) can be set to 16,32,64 & 1K Lengths.

MR8[2]	MR8[1:0]	Burst Length	Example of Sequence of Bytes During Wrap	
			Starting Address	Byte Sequence
‘0	‘00	Wrap 16	4	[4,5,6,…15,0,1,2,…]
‘0	‘01	Wrap 32	4	[4,5,6,…31,0,1,2,…]
‘0	‘10	Wrap 64	4	[4,5,6,…63,0,1,2,…]
‘0	‘11	Wrap 1K	4	[4,5,6,…1023,0,1,2,…]
‘1	‘00	Hybrid 16	2	[2,3,4,…15,0,1],16,17,18,…1023,0,1,…
‘1	‘01	Hybrid 32 (default)	2	[2,3,4,…31,0,1],32,33,34,…1023,0,1,…
‘1	‘10	Hybrid 64	2	[2,3,4,…63,0,1],64,65,66,…1023,0,1,…
‘1	‘11	Wrap 1K	2	[2,3,4,…1023,0,1,2,…]

The Linear Burst Commands (INST[5:0]=6’b100000) override MR8[2:0] settings and forces the current array read or write command to do 1K Byte Wrap (equivalent to having MR8[1:0] set to 2’b11). The burst continues linearly from the starting address and at the end of the page, then wraps back to the beginning of the page. This special burst instruction can be used on both array write and read.

AP Memory reserves the right to change products and/or specifications without notice
@2019 AP Memory. All rights reserved

7.8 Half Sleep Mode

Half Sleep Mode is a feature which puts the device in an ultra-low power state, while the stored data is retained. Half Sleep Mode Entry is entered by writing 8'hF0 into MR6. CE# going high initiates the Half Sleep mode and must be maintained for the minimum duration of tHS. The Half Sleep Entry command sequence is shown below.

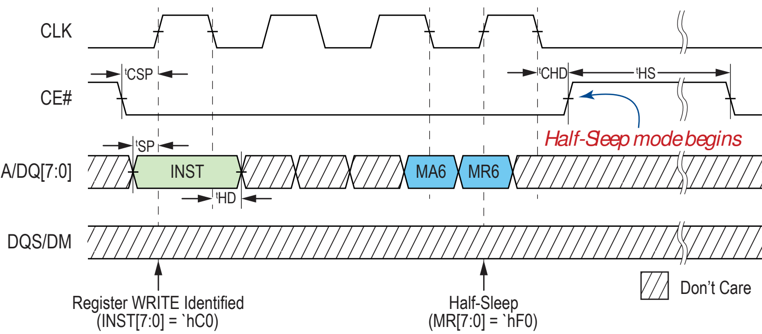

Figure 13: Half Sleep Entry Write (default WL0)

Half Sleep Exit is initiated by a low pulsed CE#. Afterwards, CE# can be held high with or without clock toggling until the first operation begins (observing minimum tXHS).

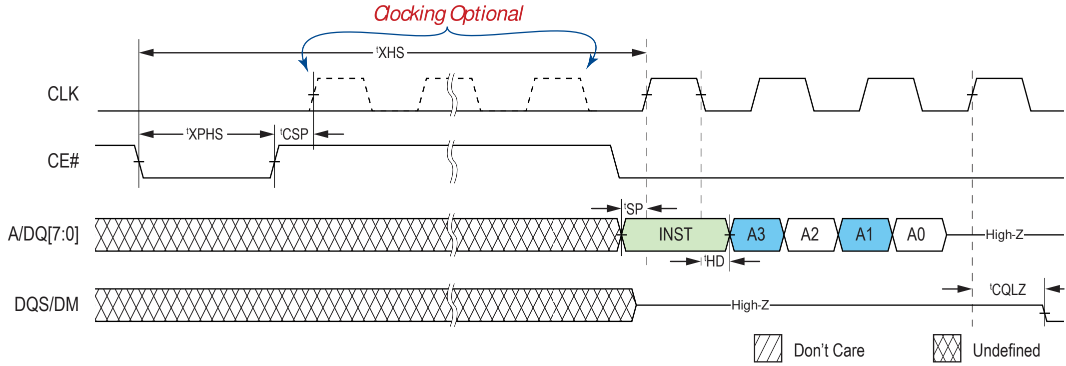

Figure 14: Half Sleep Exit (Read Operation shown as example)

AP Memory reserves the right to change products and/or specifications without notice
@2019 AP Memory. All rights reserved

7.9 Deep Power Down Mode

Deep Power Down Mode (DPD) is a feature which puts the device into power down state. DPD Mode Entry is entered by writing 8'hC0 into MR6. CE# going high initiates the DPD Mode and must be maintained for the minimum duration of tDPD. The Deep Power Down Entry command sequence is shown below.

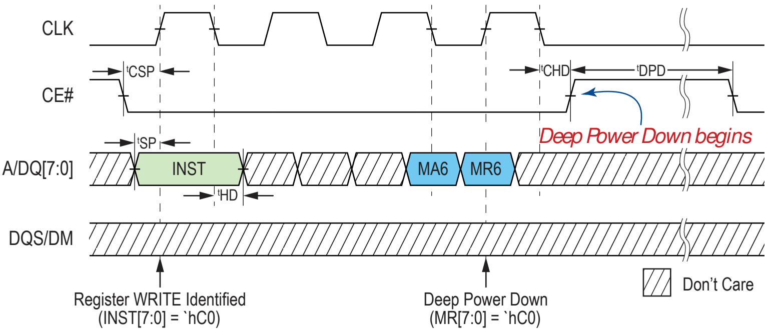

Figure 15: Deep Power Down Entry

Deep Power Down Exit is initiated by a low pulsed CE#. After a CE# DPD Exit , CE# must be held high with or without clock toggling until the first operation begins (observing minimum tXDPD).

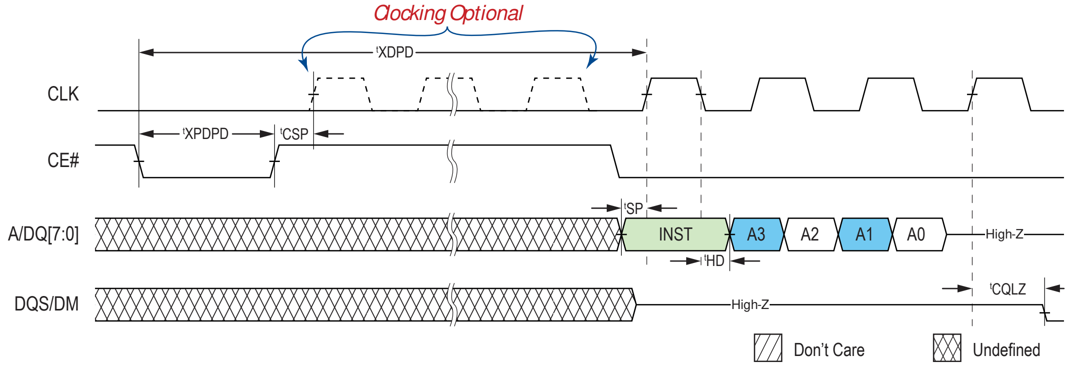

Figure 16: Deep Power Down Exit (Read Operation shown as example)

Register values and memory content are not retained in DPD Mode. After DPD mode register values will reset to defaults. tDPDp is minimum period between two DPD Modes (measured from DPD exit to the next DPD entry) as well as from the initial powerup to the first DPD entry.

8 Electrical Specifications

8.1 Absolute Maximum Ratings

Table 21: Absolute Maximum Ratings

Parameter	Symbol	Rating	Unit	Notes
Voltage to any ball except V_{DD}, V_{DDQ} relative to V_{SS}	VT	-0.4 to V_{DD}/V_{DDQ}+0.4	V	
Voltage on V_{DD} supply relative to V_{SS}	V_{DD}	-0.4 to +2.45	V	
Voltage on V_{DDQ} supply relative to V_{SS}	V_{DDQ}	-0.4 to +2.45	V	
Storage Temperature	T_{STG}	-55 to +150	°C	1

Notes 1: Storage temperature refers to the case surface temperature on the center/top side of the PSRAM.

Caution:
Exposing the device to stress above those listed in Absolute Maximum Ratings could cause permanent damage. The device is not meant to be operated under conditions outside the limits described in the operational section of this specification. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

8.2 Pin Capacitance

Table 22: Bare Die Pin Capacitance

Parameter	Symbol	Min	Max	Unit	Notes
Input Pin Capacitance	CIN		4	pF	VIN=0V
Output Pin Capacitance	COUT		6	pF	VOUT=0V

Note 1: spec'd at 25°C.

Table 23: Package Pin Capacitance

Parameter	Symbol	Min	Max	Unit	Notes
Input Pin Capacitance	CIN		8	pF	VIN=0V
Output Pin Capacitance	COUT		10	pF	VOUT=0V

Note 1: spec'd at 25°C.

Table 24: Load Capacitance

Parameter	Symbol	Min	Max	Unit	Notes
Load Capacitance	C_L		15	pF	

Note 1: System C_L for the use of package

AP Memory reserves the right to change products and/or specifications without notice

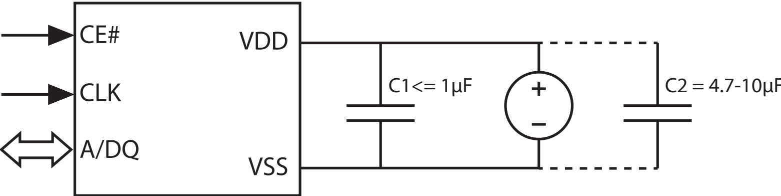
8.3 Decoupling Capacitor Requirement

System designers need to take care of power integrity considering voltage regulator response and the memory peak currents/usage modes.



8.3.1 Low ESR cap C1:

It is recommended to place a low ESR decoupling capacitor of <=1µF close to the device to absorb transient peaks.

8.3.2 Large cap C2:

During Half-sleep modes even though half-sleep average currents are very small (less than 100µA), device will internally have low duty cycle burst refresh for an extended period of time of a few tens of microseconds. These refresh current peaks are large. During this period if the system regulator cannot supply large peaks for several microseconds, it is important to place a 4.7µF-10µF cap to take care of burst refresh currents and replenish the charge before next burst of refreshes.

If required please contact AP Memory for further current peak details.

8.4 Operating Conditions

Table 25: Operating Characteristics

Parameter	Min	Max	Unit	Notes
Operating Temperature (extended)	-40	105	°C	1
Operating Temperature (standard)	-40	85	°C	

Note 1: Extended temp range of -40 to 105°C is only characterized; Standard test condition is -32 to 105°C.

AP Memory reserves the right to change products and/or specifications without notice

8.5 DC Characteristics

Table 26: DC Characteristics

Symbol	Parameter	Min	Max	Unit	Notes
V_{DD}	Supply Voltage	1.62	1.98	V	
V_{DDQ}	I/O Supply Voltage	1.62	1.98	V	
V_{IH}	Input high voltage	V_{DDQ}-0.4	V_{DDQ}+0.2	V	
V_{IL}	Input low voltage	-0.2	0.4	V	
V_{OH}	Output high voltage (I_{OH}=-0.2mA)	0.8 V_{DDQ}		V	
V_{OL}	Output low voltage (I_{OL}=+0.2mA)		0.2 V_{DDQ}	V	
I_{LI}	Input leakage current		1	µA	
I_{LO}	Output leakage current		1	µA	
ICC	Read/Write @13MHz		4	mA	2
	Read/Write @133MHz		16	mA	2
	Read/Write @166MHz		19	mA	2
	Read/Write @200MHz		22	mA	2
ISB_{EXT}	Standby current (extended temp)		600	µA	1,3
ISB_{STD}	Standby current (standard temp)		400	µA	3
$ISB_{STDroom}$	Standby current (room temp)		200	µA	1,3,5
ISB_{STDHS}	Standby current (half sleep 25°C)		60	µA	3,4,6,7
ISB_{STDDPD}	Standby current (Deep Power Down -40°C to +85°C)		30	uA	8

Note 1: Spec'd up to 105°C.

Note 2: Current is only characterized.

Note 3: Without CLK toggling. ISB will be higher if CLK is toggling.

Note 4: Slow Refresh.

Note 5: **Typical $ISB_{STDROOM}$ 132uA**.

Note 6: Current is only guaranteed after 150ms into Half Sleep mode.

Note 7: **Typical ISB_{STDHS} 40uA**

Note 8: **Typical mean ISB_{STDDPD} 14uA at 25°C**

1/4	22	µA	1,2,3
1/8	20	µA	1,2,3

Table 28: Typical PASR Current @ 85°C

`***Standby Current*** @ 85°C			
PASR	***ISB –typical mean***	***Unit***	***Notes***
Full	380	µA	2
1/2	300	µA	2
1/4	250	µA	2
1/8	220	µA	2
Half Sleep Current @ 85°C			
PASR	***I Half Sleep-typical mean***	***Unit***	***Notes***
Full	240	µA	2,3
1/2	144	µA	2,3
1/4	96	µA	2,3
1/8	48	µA	2,3

Note 1: Slow Refresh current is only attainable by enabling Slow Refresh Frequency (see Table 17)
Note 2: PASR Current is only characterized based on 128M density without CLK toggling.
Note 3: Spec'd Half Sleep current is only guaranteed after 150ms into Half Sleep mode.

8.7 AC Characteristics

Table 29: READ/WRITE Timing

Symbol	Parameter	BGA 1.8V Only -7(133Mhz) Min	Max	-6(166MHz) Min	Max	-5(200MHz) Min	Max	Unit	Notes
tCLK	CLK period	7.5		6		5		ns	
tCH/tCL	Clock high/low width	0.45	0.55	0.45	0.55	0.45	0.55	tCLK	
tKHKL	CLK rise or fall time		1.2		1		0.8	ns	
tCPH	CE# HIGH between subsequent burst operations	15		18		20		ns	
tCEM	CE# low pulse width (excluding Half Sleep exit)		4		4		4	µs	Standard temp
			1		1		1	µs	Extended temp
tCEM	CE# low pulse width	3		3		3		tCLK	Minimum 3 clocks
tCSP	CE# setup time to CLK rising edge	2		2		2		ns	
tCHD	CE# hold time from CLK falling edge	2		2		2		ns	
tSP	Setup time to active CLK edge	0.8		0.8		0.8		ns	
tHD	Hold time from active CLK edge	0.8		0.8		0.8		ns	
tHZ	Chip disable to DQ/DQS output high-Z		6		6		6	ns	
tRC	Write Cycle	60		60		60		ns	
tRC	Read Cycle	60		60		60		ns	
tHS	Minimum Half Sleep duration	4		4		4		µs	
tXHS	Half Sleep Exit CE# low to CLK setup time	150		150		150		µs	
tXPHS	Half Sleep Exit CE# low pulsewidth	60		60		60		ns	
			4		4		4	µs	Standard temp
			1		1		1	µs	Extended temp
tDPD	Minimum DPD duration	500		500		500		µs	
tDPDp	Minimum period between DPD	500		500		500		µs	
tXDPD	DPD CE# low to CLK setup time	150		150		150		µs	
tXPDPD	DPD Exit CE# low pulsewidth	60		60		60		ns	
tPU	Device Initialization	150		150		150		µs	
tRP	RESET# low pulse width	1		1		1		µs	
tRST	Reset to CMD valid	2		2		2		µs

9 Change Log

Version	Date	Description
1.0	Jul 21, 2017	Initial version
1.1	Aug 6, 2017	Added package outline and pin cap table; corrected tCQLZ reference edge; corrected tCHD reference edge in table; added don't care data to Register Write drawing
1.2	Sep 29, 2017	Added note for latency count of register read, updated WLCSP(1CS), multi-die configuration and Deep Power Down
1.3	Oct 04, 2017	Added spec of ISB_{DPD} and note of typical ISB_{DPD}
1.4	Oct 04, 2017	Added spec of DPD timing
1.5	Oct 13, 2017	Added DPD code in table 19
1.6	Feb 14, 2018	Updated marking of WLCSP
1.7	Apr 13, 2018	Removed Hybrid64, RBX, tRBXwait
1.8	Apr 26, 2018	Added note for special part of OBM
1.9	Apr 27, 2018	Revised signal table, minimum burst write and configuration of 64Mb*2; removed Reset#, corrected typo
2.0	May 31, 2018	Revised 64Mb addressing to 128Mb and addressing with 2CE#
2.1	Oct 24, 2018	Revised ball map; extended part number
2.2	Dec 11, 2018	Removed note for OBM
2.3	Dec 20, 2018	Corrected MSB typo in commend truth table
2.4	Jan 09, 2019	Updated PASR address mapping, Tj to -40C
2.41	Jan 09, 2019	Add BGA 24 ball; updated Block diagram, Tc to -40C and Pin Cap
2.5	Aug 09, 2019	Noted in Section2; revised Section 6; modified section 7.4 table; Noted for Table 3, 6 11, 24 and 26, noted 128M in Table 27 and 28
2.6	Aug 16, 2019	Added $ISB_{STDroom}$; updated tXHS; revised ISB_{STDHS}; revised table in section 8.6; Added section 8.3
2.7	Sep 27, 2019	Updated header and page 1; updated ICC in Table 26; updated Table 27and Table 28
3.4	Oct 30, 2019	Updated notes for Table 15, Table 20, and section 7.5
3.5	Nov 14, 2019	Updated notes in section 7.5, Table 16, Table 18 and Table 29
